

# PARKER JOINERY SUPPLY WILKINS ROBERTS BUILDING & CARPENTRY WITH BERECO TRADITIONAL SPIRAL BALANCE SASH WINDOWS & FRENCH DOORS

We were recently asked by Tunbridge Wells based Wilkins Roberts Building & Carpentry to provide best quality replacement windows for a unique period property known as The Lodge.

We supplied the company with Bereco windows and doors for the rear extension to the building. Company owners Ian Wilkins and Mark Roberts were so impressed with the products that they then asked us to supply replacement windows and doors for the main house which were designed to replicate the style of the original architecture.

The rear extension to the property features Bereco timber French Doors incorporating a high security espagnolette locking system and fully adjustable hinge systems.

The main house now features top of the range Bereco Traditional Spiral balance sliding sash windows with curved plates. The arched windows were specially made to compliment the existing architecture and to enhance the appearance from the inside. The replacement windows have the curved plate in the top of the window which compliments the arched stonework, making the new replacement window more aesthetically pleasing.

## **BUILDERS OF DISTINCTION**

Wilkins Roberts Building & Carpentry was formed over 20 years ago by Ian Wilkins and Mark Roberts, who brought together their separate businesses enabling them to offer the full range of building services to their clients. The company generally works on high quality constructions, large extensions and high end finishes.
